

Campaign Performance & Demand Generation Analysis

1. Project Objective

The objective of this project was to evaluate the performance of multi-channel marketing campaigns and identify opportunities to improve customer acquisition efficiency and return on marketing investment. The analysis focuses on translating campaign-level data into actionable insights that support data-driven marketing.

2. Data & Scope

The project uses structured marketing campaign data representing performance across three channels:

- **Email**
- **Paid Search**
- **Social Media**

The dataset includes impressions, clicks, conversions, marketing spend, and revenue, along with calculated performance metrics.

3. Key Metrics Analyzed

- **Click-Through Rate (CTR)** – campaign engagement effectiveness
- **Conversion Rate** – funnel efficiency from click to conversion
- **Cost per Acquisition (CPA)** – cost efficiency of customer acquisition
- **Return on Investment (ROI)** – profitability of campaigns and channels

Metrics were analyzed at both **channel level** and **campaign level**.

4. Dashboard Overview

An executive-style Excel dashboard was created to present insights clearly and concisely. The dashboard includes:

- **KPI Summary:** Total Spend, Total Conversions, Average CPA, Overall ROI
- **Channel Performance Analysis:**
 - Conversion Rate by Channel
 - CPA by Channel
- **Campaign Performance Table:**
 - Campaigns ranked by ROI with corresponding CPA values to support prioritization

The dashboard is designed for quick executive review and decision-making.

5. Key Insights

- **Email campaigns** delivered the highest ROI while maintaining the lowest CPA, indicating strong efficiency and profitability.
 - **Paid Search campaigns** generated high conversion volume but at a higher acquisition cost.
 - **Social Media campaigns** showed lower conversion efficiency and higher CPA, suggesting optimization opportunities.
 - A small subset of campaigns contributed disproportionately to overall ROI, highlighting clear scaling opportunities.
-

6. Recommendations

- Reallocate marketing budget toward high-ROI, low-CPA campaigns, particularly within Email and high-intent Paid Search.
 - Optimize or redesign low-ROI, high-CPA campaigns to improve efficiency.
 - Focus testing and experimentation on improving conversion performance for high-engagement channels.
-

7. Tools & Skills Used

- **Excel** (data cleaning, calculated metrics, pivot analysis, dashboarding)
 - **Marketing Analytics & Business Analysis**
 - **Data Visualization & Performance Reporting**
 - **Data-driven decision making**
-

Outcome

This project demonstrates the ability to analyze marketing data, build executive-level dashboards, and deliver clear, actionable insights that support strategic marketing decisions.
